# Preston Crowe

prestonjcrowe@protonmail.com · prestoncrowe.com · github.com/prestonjcrowe

Security Engineer with 5+ years experience building detectors, internal tools, and TI infrastructure.

## [EXPERIENCE]

**ExtraHop Networks** — Seattle, WA
*Security Engineer III, March 2024 – Present*

- Built an Apache Iceberg indicator data lake serving analyst queries at 100M+ indicator scale; exported TI collections to a production enrichment service.
- Developed the first ExtraHop MCP server for agentic enumeration of detections and network devices, winning the 2025 hackathon audience choice award.

*Security Engineer II, March 2022 – March 2024*

- Automated AWS traffic-mirroring environments to benchmark detections against breach and attack simulation platforms; added coverage for 3,000+ Mandiant Security Validation (MSV) actions, over 50% of the MSV catalog.
- Authored an internal MSV testing guide and worked with sales engineers on best-practice configurations in customer engagements.

*Security Engineer I, December 2020 – March 2022*

- Shipped detections within hours of disclosure for critical vulnerabilities (e.g., Log4Shell, SUPERNOVA).
- Developed detection strategies for red team tools (Redline, BloodHound, PetitPotam, Farmer); built pcap manipulation, device discovery, and automated traffic replay tooling with Threat Research and performance teams.
- Automated CVE triage for network vulnerabilities, eliminating a weekly one-hour meeting for the ~10-person threat research team (520 researcher-hours per year).

---

**Baffin Bay Networks** — Seattle, WA
*Internship, Product Development – June 2019 – September 2019*

- Built an internal dashboard to monitor a honeypot network hosted across dozens of cloud providers.
- Developed an API for Baffin Bay's Threat Insight platform to provide context enrichment for IPs.

---

**F5 Networks** — Seattle, WA
*Internship, F5 Labs – June 2018 – September 2018*

- Worked with a team of security researchers to develop a vulnerability data pipeline.
- Built a threat map with React and D3.js to visualize suspicious traffic in real time.
- Generated data visualizations and animations for a Black Hat 2018 talk.

---

**NASA AMES Research Center** — Mountain View, CA
*Internship, OpenMCT – June 2017 – September 2017*

- Implemented JSON import/export for workspaces in an open-source mission control application.

---

## [SKILLS]

- **Detection & Response:** detection engineering / validation, vulnerability triage, BAS
- **Threat Intelligence:** TI pipelines, IDS, CVE and exploit monitoring, OSINT
- **Threat Research:** exploit reproduction, honeypots, red team tool analysis
- **Network Security:** PCAP analysis and generation, traffic mirroring and replay
- **Data & AI Engineering:** Apache Iceberg, ETL, SQL, MCP, agentic tooling, data lakes
- **Languages & Frameworks:** Python, Go, JavaScript, Java, C, React, Vue.js, D3.js
- **Cloud & Infrastructure:** AWS, Linux, Docker, Terraform, Ansible, GitLab CI/CD
- **Interests:** SDR, ESP32, LoRa, 3D printing, data hoarding, homelab

---

## [EDUCATION]

**University of Washington** — Seattle, WA
*Sep 2016 – Jun 2020*
B.S. Computer Science, Dean's List, 3.71 GPA

---

## [PUBLICATIONS]

- F5 Networks, 2018: *Breaking Down the Door to Emergency Services through Cellular IoT Gateways*
- ExtraHop, 2021: *PetitPotam: Expanding NTLM Relay Attacks*
